Line Number	Severity	Comments
1	Consider/Suggestion	Consider adding a comment at the top of the file describing what the script does, just for organization. Or add more comments overall so the code will be easier to edit and refer to later on.
4	Optional	If the container with .product-grid isn't found, the script will fail without an error. Consider adding a check and a message to the user if someone happens here (error in html file, issue loading the html, etc.) so it's easier to debug.
13	Concern	The product image as of now is a placeholder. Need to load the actual product images.
Lines 12-39	Optional	This could be a good block to turn into it's own function (like createProduct) that builds a product card for easier testing and reusability.
65	Consider/Comment	Storing cart in localStorage is a good approach/solution for now, but it won't carry over between devices or after logging out since we want to be able to have user accounts.
